

SPROCKETS

We manufacture a wide range of sprocket specifications to complement our extensive conveyor chain product range.

We have 1000's of cast iron sprockets available from stock to suit our British Standard conveyor chains.

1 Pictured is a 6" pitch 8 tooth sprocket machined to suit a flanged roller.

We can produce sprockets to suit chains of pitch 25 mm up to 400 mm - in fabricated mild, alloy & stainless steel & plastic materials.

Cast, profile & machine cut tooth profiles, with a full machining & flame hardening service available.

2 Fabricated stainless steel - one sided boss - Machine cut teeth for the most accurate engagement with the chain.

3 Food grade plastic sprocket - Fully machine cut from solid - one sided boss.

4 Fabricated EN 8 central boss sprocket, with profile cut flame hardened teeth for additional wear resistance.

5 Fabricated EN 8 one sided boss split sprocket (quicker to remove & fit during maintenance), with machine cut flame hardened teeth for high load high wear applications.

Our split sprockets have machined mating faces for a solid location with machine cut teeth.

6 Fabricated EN 8 split plate and boss sprocket with machine cut segmental teeth to allow replacement of teeth without removal of the boss from the shaft.

As well as a wide range of specifications & materials, we can also offer a range of surface treatments to increase corrosion resistance.

Please contact us to discuss your requirements.
